

**New:
Riedel High Performance.
The ultimate enhancer for fine wines on an XL stem.**

The name of this glass series says it all: high performance in functionality and design.

The series delivered a perfect performance at numerous international tastings, where it was well received by both industry professionals and consumers.

The machine-made bowl's optical effect has a positive impact on the flavors and aromas. Not only does it add a pleasing visual aspect to the bowl, but it also increases its inner surface area, allowing the wine to open up and fully develop the subtle nuances of its bouquet.

With a height of 32.5cm, the High Performance glasses stand above all else on any table. Cabernet, Pinot Noir, and Riesling glasses are available in red, black and clear crystal stems. Champagne glasses are also available in gold.

The stems are produced with meticulous care in Riedel's Kufstein factory. Notably, the black stem is made entirely of black crystal. In contrast, for the red and gold offerings, the color is contained within the center of the stem and is surrounded by a layer of clear crystal.

All Riedel High Performance glasses are made of crystal glass and are dishwasher safe.
